

# Turing

## Hiep

Vietnam

- have 6 years experience in Angular - understand lazyload, code-splitting, optimize, server side rendering SSR, Nodejs, PostgreSQL, docker - solve the problem of enterprise company

### Technical Skills

You will be matched for these following skills:

AngularJS	2 years
Angular	6 years
Angular 2+	6 years

Additional skills:

TypeScript   1 year	JavaScript   1 year	Project Management   1 year	Unix   1 year
Unit Testing   1 year	PostgreSQL   1 year	Communication   1 year	

### Work History

#### Founder

Awread

September 2020 - Present

1 yrs 9 mos

**Awread**

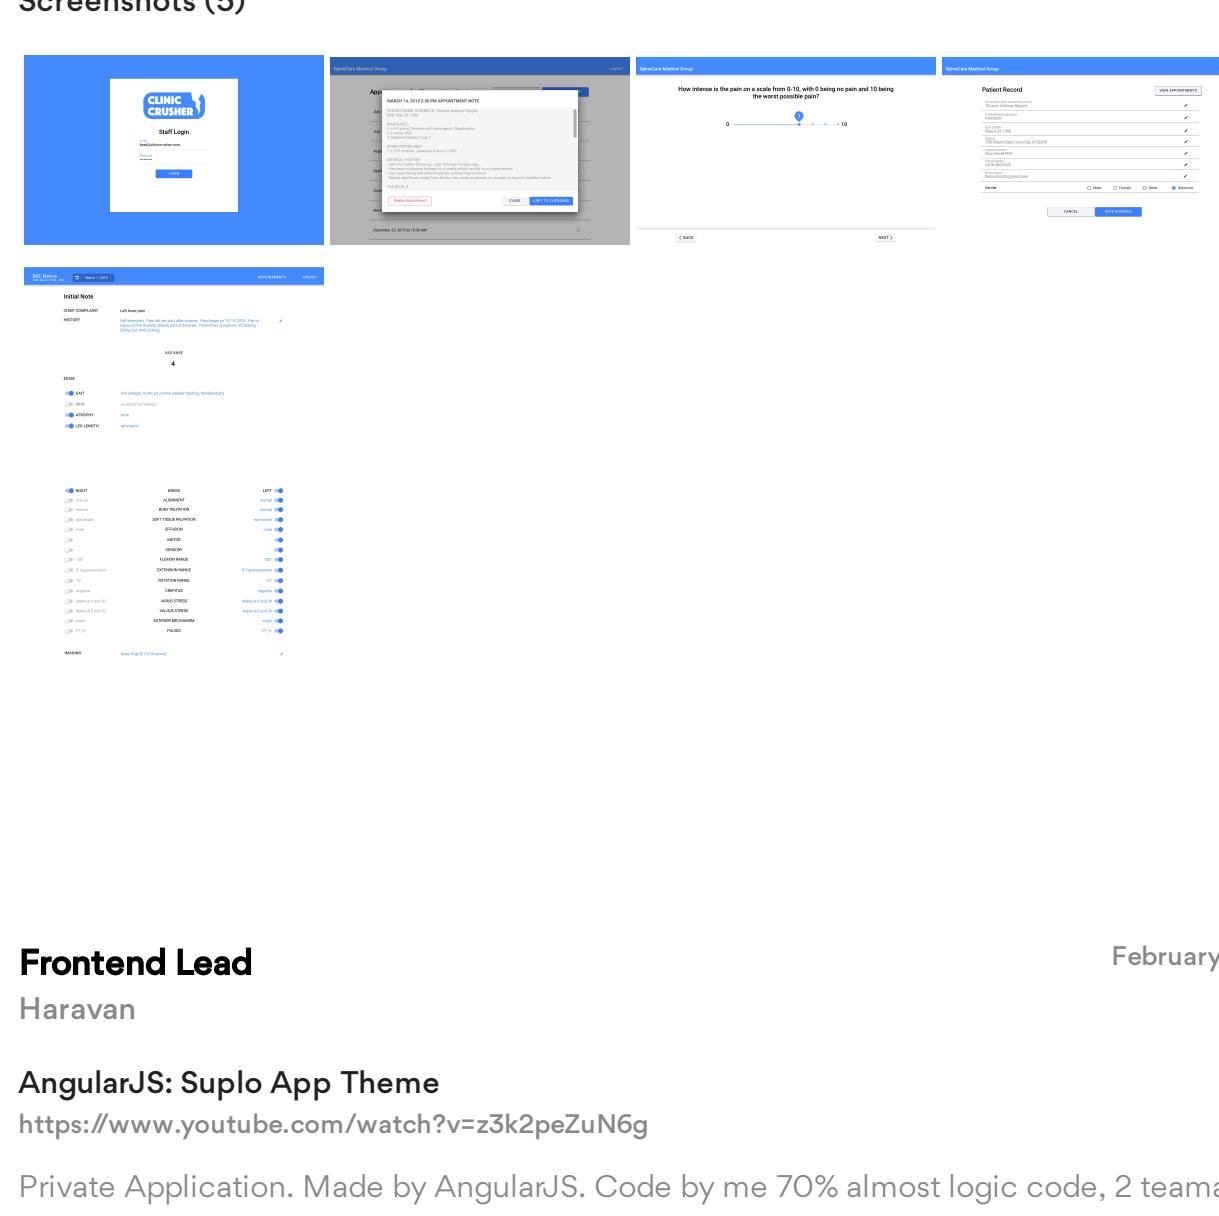

<https://awread.vn>

This project is built from AngularJS to Angular 14, with Nodejs as backend, PostgreSQL as database. Connecting by Postgraphile as graphql portal API. Deploy using Portainer to deploy docker with Dokku manager. This project have two part. Reader website and writer website. Reader website is for reader who can read, buy new book, donate for author, write their comment and review to the page. Writer website is for writer, who can write new book, select price for the book, add discount for the price. See how much they earn in the income section.

The project outcome is from two part. With the donate we take 10% on each transaction. With the buy, we take 30% each transaction

Bookable

September 2018 - September 2020

2 yrs

**Bookable**

<https://bookable.ca>

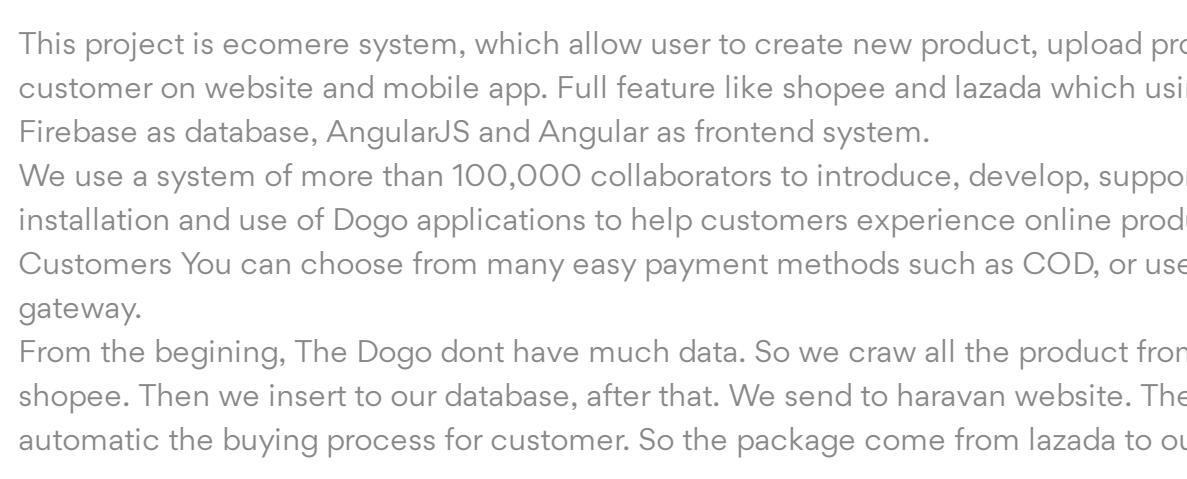

We create bookable to help nail and spa using Angular and AngularJS as SPA client. With firebase as database. And node.js to lauch server on Google Cloud. We have 3 application. the first is booking management admin app. Which is most heavy feature with appointment management. Other feature is user management. Service management, POS system which using tablet or mobile phone to make the payment. Marketing campain with email, sending sms for birthday, and giftcard. Allow to connect with physic device like giftcard scanner and a thermal printer through wifi or usb connection.

The second app is checkin app for customer, who go in the shop, can enter their info to connect the main database the third app is mobile app, which was built by Ionic allow customer to book the appointment from mobile app. include custom notification, and google map to locate distance from their position to near by shop with calculated distance

the project outcome from subscription monthly
